

CEWELD 317L Tig

TYPE Solid stainless steel Tig welding wire with high Molybdenium content.

APPLICATIONS For welding stabilized and un-stabilized CrNiMo(N) type of steels with high corrosion resistance.

Also suitable for dissimilar welds between steel and stainless steel or dissimilar stainless steels. 317L has good resistance to general corrosion and pitting due to its high content of molybdenum. The alloy has a low carbon content which makes it particularly recommended when there is a risk

of intergranular corrosion. The alloy is used in severe corrosion conditions such as in the $\,$

petrochemical, pulp, cotton and paper industries.

PROPERTIES Austenitic, non magnetic stainless steel alloy with high mechanical properties and excellent

weldabillity, corrosion resistance is better than AISI 316 due to the high Mo. content. Suitable for use

up to 400°C
