

TYPE Tubular SAW wire based on a 17% Chromium deposit with high Carbon content..

APPLICATIONS Hardfacing shafts from stainless steel parts, molt repairs, rebuilding pump parts, etc. Suitable for

plating and joining equal and similar ferritic Cr-steels and cast steels. Proper weldings are subject to the recommended heat treatment. This welding wire is specially suitable for sealing surfaces on

water-, steam and gas-valves, especially for sulphuric gases.

PROPERTIES Higher productivity, higher deposition rates and improved wetting properties compared to solid

wires with comparable analysis. Best to be used with CEWELD® FL 915 or CEWELD® FL 8111 welding flux. The deposit is resistant to seawater, thin acids and scale resistant in air and oxidizing gases up

to 950°C. The weld deposit can be tempered.
