

# CEWELD SP Cu 99,9%

|                       |                                                                                                                                   |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| TYPE                  | 99,9% pure copper metal powder for PTA and Flame Spray applications.                                                              |
| TOEPASSINGEN          | Conductive surfaces, corrosion protection, electrical contacts, art applications, condensators etc.                               |
| EIGENSCHAPPEN         | Excelent wear, corrosion and cavitation resistance in many mediaExcelent electrical conductivityExcelent for heat transfer layers |
| CLASSIFICATIE         |                                                                                                                                   |
| GESCHIKT VOOR         | Electrical contact surfaces, Cunductors, Condensators, heat transfer tubing.                                                      |
| GOEDKEURINGEN         |                                                                                                                                   |
| LASPOSITIES           |                                                                                                                                   |
| (%)                   |                                                                                                                                   |
| MECHANISCHE WAARDEN   |                                                                                                                                   |
| HERDROGEN             | Not required                                                                                                                      |
